

FoodNet Annual Reports show that *Salmonella* spp. is the first cause for foodborne diseases and one of the major causes for FDA & FSIS recalls. Therefore, most countries have implemented strict criteria for this pathogen monitoring.

In response to industry concerns, Pall GeneDisc Technologies provides an ideal solution for food processors in need of a reliable control of *Salmonella* spp. risk.

### GeneDisc System Benefits

**Rapid** — Accelerate the batch release of your short shelf life products and raw materials. While other methods such as immunoassays or culture methods require up to 3 days, the Pall GeneDisc method allows a detection of *Salmonella* in as fast as 10 hours.

**Easy to use** — GeneDisc solutions are designed for routine use. Implementing PCR (Polymerase Chain Reaction) has never been this easy.

**High throughput capability** — Process up to 96 samples DNA extractions simultaneously in less than one hour.

**Modular** — System modularity fits your throughput needs: up to 96 samples can be analyzed in a one hour PCR run.

### A Solution Designed For Food Industries

**In line with MLG 4 and ISO 6579** – NF VALIDATION and AOAC certified method.

**Test multiple pathogens simultaneously** – Analysis with pathogenic *E. coli* O157 or STEC is available and does not require any additional hands-on time nor enrichment.
